Handbook of pests and Information guide for integrated pest management in vegetable brassicas

The information guide for integrated pest management in vegetable brassicas was published by the Fresh Vegetable Product Group of Horticulture New Zealand in July 2009.

The pocket sized handbook (pictured above) will help growers and scouts to identify key pests and diseases out in the field. The CD-ROM (pictured below) includes information and management advice relevant to all stages of the crop cycle, from selecting a field prior to planting through to scouting for pests and diseases and managing these issues. Used together, these resources will be an important tool in the integrated pest management of vegetable brassicas crops in New Zealand for years to come.
