

FALL ARMYWORM UPDATE (Courtesy of Seed and Grain Readiness and Response)

10th February 2023

Key Points:

- Last week's find in Central Otago has now been shown **NOT** to be fall armyworm. Closer scrutiny of the specimen at MPI proved it was actually an early instar larvae of diamond back moth, *Plutella xylostella*, commonly found in brassicas and other broad leaf crops.
- Since 1st September 2022 there have been 107 confirmed FAW finds (this is the number of properties where the pest has been found, not the number of insects found)
- Numbers of moths in Northland traps have dropped significantly in the past week, marking the beginning of a third generation.
- ALL maize and sweet corn crops should be scouted nationwide.
- There are no signs of FAW yet in Canterbury, but some damage from other established noctuids was noted.
- The insecticide Sparta is on label for use on maize and sweetcorn crops.
- We are still in a response. All finds must be reported to <https://report.mpi.govt.nz/pest> or 0800 80 99 66
- There are no negative consequences to growers for reporting, as this pest will not be controlled by removing crops.

Please contact your local advisor for details on the safe use of this or any other insecticides on maize or sweetcorn.

Thresholds of economic damage

Plant Health Australia provides useful guidance for this:

CROP	THRESHOLD
Maize vegetative	>3 larvae per plant and/or 50% of plants show signs of fresh feeding
Maize whorl stage	>20% of plants at whorl stage with one or more larvae and/or more than 75% of plants showing signs of feeding damage
Sweet corn Tassel emergence	>15% of plants infested at tassel emergence
